

MEDICOVI[®]

The sensory *water* filled insoles that relieves, reduces and removes pain through *pressure relief* and *movement*

Arthritis

Forefoot problems

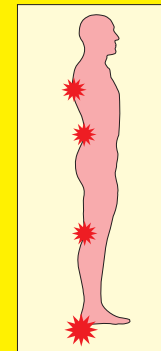

- The water movement creates a cushion that distribute the pressure so painful areas under the foot is relived of pressure loads
- The water movement massages the ball of the forefoot so the blood circulation is increased making the ball of the forefoot
- The water movement reduces painful long term pressure loads to painful areas under the forefoot.

Diabetes

- The water movement protects the diabetic foot from harmful long term pressure strains on sensitive areas under the foot.
- The water movement massages the sole of the foot hereby increasing the blood circulation
- The water movement reduces the pressure strain on the sole of the foot.
- The water movement stimulates the balance

Heel spurs Knee, hip and back

- The water movement creates a huge carrying surface in the heel
- The water movement in the heel has a powerful shock absorbent effect which protects the heel, knee, hip
- The water movement massages the foot making the foot more flexible, which will reduce the problems with heel spurs
- The water movement increases the blood circulation hereby reducing the felling of tiredness that occurs with standing and walking work, which will provide relief to the knee, hip and back.
- The water movement forces the body into a more frequent swaying movement which is very pressure relieving on the
 - knee, hip and back
